

# Create and copy frame properties

## Tutorial

Name:	Create and copy frame properties
Description:	Use interactive database editing to create and copy frame section properties between models.
Program:	CSiBridge
Version:	15.0.0+
Model ID:	na

Using [interactive database editing](#), the definition of [frame](#) section properties may be copied from an existing Model A to a new Model B through the following process:

- Open Model A, select Orb (circular bridge icon) > Export > Text and then select all tables under Model Definition > Property Definitions > Frame Section Properties for export. Click OK to export the model to a text file.
- Open Model B, select Orb > Import > Text to import the previously exported text file. Select Add to Existing Model and carefully check the import log for any error or warning messages.
- After saving the changes, frame section properties from model A will be available in Model B.
